1/14/2011 FOR IMMEDIATE RELEASE:

Savage Range Systems Launches Nexgen Target Control System

Westfield, MA: **Savage Range Systems**, manufacturers of indoor and outdoor shooting ranges, bullet traps, target systems and shoot houses, has launched their new **Nexgen Target Control System**.

The **Nexgen** brings outstanding performance and operation to pneumatic and Running Man systems. Advances include remarkable programming capability, multiple course of fire functionality, ease of use, remote capability and off-the-shelf maintenance. Running Man and turning targets can be set to run simultaneously. Running Man carriers can be programmed to automatically run with multiple changes in direction and speed, and can be coordinated/linked with each other *or* run completely independently. The controllers are DC regenerative drives, which enable faster reversing and deceleration than standard drives.

The system communicates between the range tower and the target line via an Ethernet cable. This is completely stand alone, and not hooked up to the internet. An optional handheld transmitter is integrated into the Operator Station screens for portable remote control of programs. With a range of 350 yards from the antenna, the user can select and change exercises without returning to the main console.

To learn more about the **Nexgen Target Control System** and **Savage Range Systems**, please visit their website at www.SavageRangeSystems.com.

Savage Range Systems is a subsidiary of **Savage Sports Corporation**, which includes **Savage Arms**.
